Have you been Vaccinated yet?

As a reminder to our community- we have just entered Phase 3 of our phased reopening plan. At this time, many services are still limited, gatherings are not encouraged and restricted to small groups, and quarantine is still required for out-of-state travel if you are not vaccinated. Until we are able to vaccinate enough of the community to protect our families and loved ones, we must continue to follow these measure.

	PHASE 1	PHASE 2	PHASE 3	PHASE 4
Summary of Phase	Phase 1 began on May 5 th with the reopening of some recreational activities, including day use at state parks, playing golf, fishing, and hunting.	Phase 2 will allow small gatherings of five or fewer people, new construction, and reopening of barber shops, salons, and pet care services.	Phase 3 will allow gatherings of up to 50 people, including sports activities, and non- essential travel can resume within the US. Max 50% capacity.	Phase 4 will involve resuming the majority of public interactions. Gatherings of more than 50 people will be allowed, but, until a vaccine is available, we must maintain social distancing
What this phase looks like for Nisqually	The Reservation area in our Stay at Home Order. Anyone entering the area will be screened. Limited programs are returning, including Building crews, Parks and Trails workers, Cemetery program, Garden crew, Hatcheries and river work, Shellfish farm and program.	 Reduced services Reservation area closed/restricted: Shelter in Place Events require Public Health Officer (PHO) approval Out-of-state travel and funerals require quarantine upon return 	 Shelter in Place rescinded Limited entries and capacity reduction in buildings will continue Travel restrictions remain- quarantine guidelines remain for unvaccinated Masks and distancing required Temperature records for contact tracing required Events require PHO approval 	We will slowly enter a "new normal" with programs that are able to return safely. Even with a vaccine, we will still have to continue some social distancing practices and be able to swiftly test and respond.
